Entry Requirements

This is a challenging A level and you will need to be self motivated and determined to succeed. A minimum grade 6 in both science courses and a grade 6 in mathematics is required.

Students studying Chemistry , Biology and Physics as GCSE separate sciences, must achieve a minimum of a grade 6 in Chemistry and one other science.

Students must also achieve a minimum of a grade 6 in GCSE mathematics.

We have a proven track record with the AQA exam board for the last 16 years and have an experienced team of teachers who always provide additional support to students in need. We know this course provides an excellent foundation for science study at university and by AQA's measures we achieve outstanding results.

Year 12

They will cover the 3 branches of chemistry, Organic, Inorganic and Physical in more depth than at GCSE. This could lead to an AS qualification if desired but the Year 12 prepares them for the further demands of the A Level. We also start to teach the practical elements of the course.

Year 13

The advanced topics will be taught. Students are given the opportunity to acquire the practical endorsement qualification which some universities demand . These practical sessions support the theory teaching in some of the more challenging aspects of the course.
